Porto Alegre, Rio Grande do Sul, Brazil | Remote International Contractor

PROFESSIONAL SUMMARY

Backend Engineer with 5+ years of experience building distributed systems for U.S.-based teams and freelance clients. Specialized in Java and Spring Boot, with production experience in Go, Python, microservices, REST and gRPC APIs, event-driven architecture, Redis caching, PostgreSQL, GCP, CI/CD, and observability. Built digital wallet, market data, and compliance services at a major crypto exchange. Currently focused on AI engineering: LLM agents, tool calling, agent loops, persistent memory, and agent skills.

EXPERIENCE

- Ambush** February 2024 - Present
Backend Developer Austin, Texas, USA (Remote)
 - Top U.S. Cryptocurrency Exchange (millions of users):** Build and maintain Java and Spring Boot microservices for digital wallets, customer accounts, deposits, withdrawals, asset and market data, portfolio calculations, and KYC/compliance workflows.
 - Build internal service integrations following Spec-Driven Development (SDD), defining REST and gRPC/Protobuf contracts, OpenAPI specifications, and BFF layers before implementation.
 - Use AI coding agents (Claude Code, Codex, OpenCode) daily within the spec-driven workflow to implement, test, and review changes.
 - Implemented backend support for A/B experiments on deposit amount chips (personalized from deposit history vs. fixed amounts vs. control); the personalized variant won.
 - Implement local and distributed caching (Caffeine, Redis) and batch-remediation flows with validation and per-item error isolation.
 - Improve reliability with JUnit, Maven, GitHub Actions CI/CD, Grafana, Elasticsearch/Kibana, distributed tracing, and root-cause analysis.
- Ambush** February 2023 - February 2024
Junior Backend Developer Austin, Texas, USA (Remote)
 - Internal HR Platform:** Developed Go (Golang) microservices for candidate and employee profiles, skills filtering, and interview scheduling on PostgreSQL, integrating GCP Pub/Sub for asynchronous, event-driven communication.
- Freelance** 2021 - Present
Freelance Software Developer Remote
 - Dental practice management system:** Replaced a 1996 FoxPro system, migrating ~30 years of patient records with Python, FastAPI, SQLAlchemy, Alembic, and PostgreSQL; LGPD audit trail and database-enforced idempotency. Live in production.
 - WhatsApp AI sales agent and CRM for a vehicle dealership:** Seven independently deployed microservices (Python, FastAPI, PostgreSQL, n8n, Gemini); the LLM agent answers from live inventory and hands off to a salesperson. Live in production.
 - Timesheet and project-cost platform for an architecture studio:** Role-based app (Node.js, Express, React, PostgreSQL) with an embedded LLM assistant using tool calling with human-in-the-loop approval; Docker, GitHub Actions CI/CD, Fly.io.

AI ENGINEERING

- Personal Brain (personal AI agent, 2026):** WhatsApp agent (OpenClaw, DeepSeek, Composio), running as a pilot, with a git-versioned workspace as long-term memory: rules, risk-rated tool index, skills that evolve from use, and cron jobs.

EDUCATION

- Pontifical Catholic University of Rio Grande do Sul (PUCRS)** March 2022 - December 2026
Bachelor's Degree in Computer Science Porto Alegre, Brazil

SKILLS

- Programming Languages:** Java, Go (Golang), Python, SQL, JavaScript, Node.js
- Backend Engineering:** Spring Boot 3, FastAPI, Express, Microservices, Distributed Systems, REST APIs, gRPC, Protobuf, OpenAPI, BFF, Batch Processing, Caching
- Data & Messaging:** PostgreSQL, MongoDB, Redis, Caffeine, GCP Pub/Sub, Event-Driven Architecture, SQLAlchemy, Alembic
- AI & Agents:** LLM Agents, Agent Loops, Tool Calling, Human-in-the-Loop, Agent Skills, Context Engineering, Prompt Engineering, Claude Code, Codex, OpenCode, OpenClaw, n8n, Gemini, DeepSeek
- Quality & Operations:** GCP, Docker, Fly.io, Maven, GitHub Actions, CI/CD, JUnit, Grafana, Elasticsearch, Kibana, Distributed Tracing, Root-Cause Analysis
- Languages:** Portuguese (Native), English (Advanced Professional)
